

ANNUAL INFLATION TRENDING UP

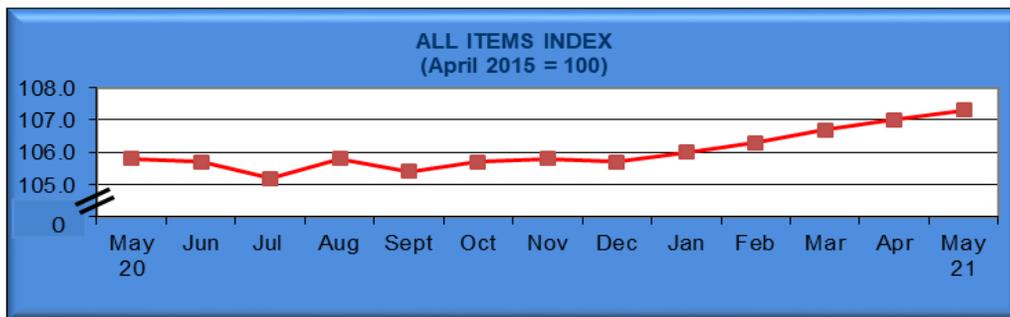

Consumers paid 1.4 per cent more in May 2021 than they did a year ago for the basket of goods and services included in the Consumer Price Index (CPI). This level of inflation rose 0.5 percentage points from the April 2021 annual inflation rate of 0.9 per cent.

Between April 2021 and May 2021 the average cost of goods and services in the CPI increased 0.3 per cent. The all-items index rose from 107.0 to 107.3 in May 2021. This means that the basket of goods and services that cost \$100.00 in April 2015 now costs \$107.30.

YEAR-TO-YEAR ANALYSIS

The Transport & Foreign Travel sector was the largest contributor to the twelve-month increase in the CPI (+6.4 per cent). The average cost of airfares increased 27.2 per cent.

The Education, Recreation, Entertainment & Reading sector and the Health & Personal Care sector also impacted strongly on the annual rate of inflation, as price shifts in these sectors measured 1.6 per cent and 2.0 per cent, respectively.

Annual Inflation Rate +1.4%

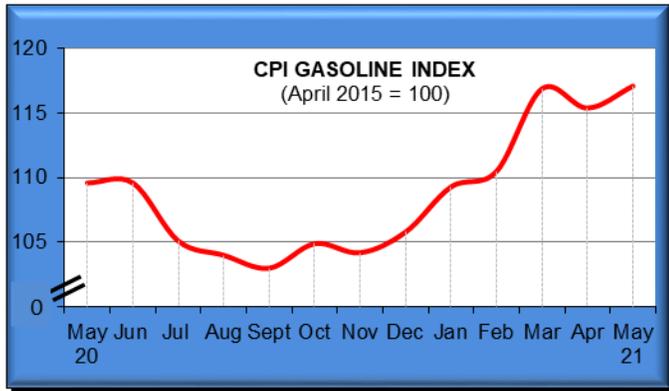

The compilation of the CPI involves the processing of several thousand price quotations. The Department of Statistics wishes to acknowledge the cooperation of the business community in supplying the required price data.

SUMMARY STATISTICS					
Period	Monthly		Period	Quarterly	
	Index	Annual per cent Change		Index	Annual per cent Change

May	107.3	+1.4			

MONTH-TO-MONTH ANALYSIS

Transport & Foreign Travel

The Transport & Foreign Travel sector moved up 3.7 per cent over the previous month, reflecting increases in the average cost of airfares (+12.4 per cent) and overseas hotel accommodations (+7.1 per cent).

Household Goods, Services & Supplies

The Household Goods, Services & Supplies sector was up 0.3 per cent for the month. On average, consumers paid 37.2 per cent more for air conditioners.

Education, Recreation, Entertainment & Reading

The Education, Recreation, Entertainment & Reading sector advanced 0.1 per cent in May. The average cost of stereo systems and televisions rose 8.4 per cent and 1.5 per cent, respectively.

Fuel & Power

The Fuel & Power sector rose 0.2 per cent. The average cost of electricity increased 0.2 per cent.

Health & Personal Care

The Health & Personal Care sector was static for the month.

Clothing & Footwear

No price movement were reported in the Clothing & Footwear sector for the month.

Tobacco & Liquor

The Tobacco & Liquor sector fell 0.1 per cent in response to the decline in the average cost of wines (-0.5 per cent) and beer (-0.2 per cent).

Food

On average, food prices dipped 0.1 per cent in May. Among the main items contributing to the decrease were sweet biscuits (-9.9 per cent), bagged oranges (-3.5 per cent) and cantaloupes (-3.2 per cent).

Rent

The Rent sector was down 0.7 per cent as the average cost of properties not subject to rent control slipped 1.6 per cent.

COMPUTING PRICE INCREASES

The Department of Statistics receives calls daily requesting the rate of inflation over specific periods of time. The following calculations are provided to guide users as to how to compute rates of price increases. The monthly index numbers can be obtained from our website: <https://www.gov.bm/departments/statistics>.

A) Month-to-Month Price Change

The price change between January and February 2020 is calculated as follows:

$$= \frac{\text{Jan 20 index} - \text{Feb 20 index}}{\text{Feb 20 index}} \times 100$$

$$= \frac{106.3 - 106.1}{106.1} \times 100$$

$$= -0.2\%$$

B) Year-to-Year Price Change

The price change between March 2020 and March 2019 is calculated as follows:

$$= \frac{\text{Mar 20 index} - \text{Mar 19 index}}{\text{Mar 19 index}} \times 100$$

$$= \frac{105.9 - 105.6}{105.6} \times 100$$

$$= 0.3\%$$

C) Particular Period Price Change

The price change between February 2020 and March 2018 is calculated as follows:

$$= \frac{\text{Feb 20 index} - \text{Mar 18 index}}{\text{Mar 18 index}} \times 100$$

$$= \frac{106.1 - 104.3}{104.3} \times 100$$

$$= 1.7\%$$

BERMUDA CONSUMER PRICE INDEX

WHAT IS THE CONSUMER PRICE INDEX?

The Consumer Price Index (CPI) is a statistical tool used for measuring changes in the general level of prices of consumer goods and services purchased by private households.

The index measures price movements of a given quality and quantity of goods and services. The mix of these consumer goods and services comprising the index, are figuratively thought of as a “shopping basket.” In constructing this “shopping basket”, the selected goods and services are organized first by commodity type. They are then divided into sub-components and assigned to a major expenditure group. The Bermuda CPI is structured into nine expenditure groups or sectors:

- Food
- Rent
- Clothing & Footwear
- Tobacco & Liquor
- Fuel & Power
- Transport & Foreign Travel
- Household Goods, Services & Supplies
- Education, Recreation, Entertainment & Reading
- Health & Personal Care

CONCEPTS AND DEFINITIONS

Base Period

The time period which is used as a reference point for measuring the price change of goods and services. The base period for the Bermuda CPI is April 2015.

Price Index Number

A single figure that shows how a set of prices has changed over a specified period of time. An index number on its own means nothing. It must be compared with an index number from another period to have meaning. For example, a comparison of the index number 97.2 for January 2014 with 100.4 for January 2016, reveals that prices have increased by 3.3 percent.

Laspeyres Equation

The CPI is computed using this statistical equation. This formula calculates the total amount of money a household needs today to purchase the same basket of goods and services that it bought in the base period, April 2015.

WEIGHTED AVERAGE

A mathematical formula that takes into account the relative importance of an item’s price change compared to the overall change in the sector or CPI.

Inflation

Inflation is the process of rising prices, resulting in diminishing purchasing power of a given sum of money.

Cost of Living Index

Many individuals refer to the CPI as a cost-of-living index. The CPI is an index of pure price change only. A cost-of-living index reflects the changes in buying or consumption patterns that consumers would ordinarily make to adjust to any change in the price of a good or service.

A COMPARISON OF RATES OF INFLATION (%) Selected Countries & Bermuda

	2017	2018	2019	2020	May 21
Bermuda	+1.9	+1.4	+1.0	+0.0	+1.4
